CJTitan, LP Unveils “The Original XTRAKTOR™” Brand Tools

SAEGERTOWN, PA, March 1, 2002 – Four years in development, the XTRAKTOR™ brand tools are a clear winner in the damaged nut, bolt, and stud remover category. Tested in the Erie, PA and Detroit, MI professional mechanic markets, XTRAKTOR™ brand tools won hands down in comparisons with its competitors. The new tools withstand more than 300 ft/lbs. of torque, have a pass-through design, and can be used with impact wrenches. Sold in 10 piece and 5 piece sets, the tools require only ¾” clearance for those tight spots. “Dixie-cup” inside diameter design creates a range of fit from one tool to the next. XTRAKTOR™ brand tools have 18-30 teeth that bite into damaged/rounded fasteners for quick and easy removal. When force is applied to the XTRAKTOR™ brand tools, the teeth engage to apply greater gripping forces to the fastener. Also designed with a quick release feature, simply tap out the damaged fastener and XTRAKTOR™ brand tools are ready to use again and again and again. The 10 piece sets range from ¼” to 21/32” without having to further round the damage fasteners like other brands on the market. XTRAKTOR™ brand tools come with a lifetime replacement warranty. Patent #6339976 was issued on January 22, 2002. CJTitan, LP will soon unveil its new line of damaged nut, bolt, and stud removers for use with metric wrenches and sockets. Lug nut/wheel lock and deep well removers will also be introduced later in 2002.
